party caller a selection of a message, and for assigning a call waiting tone according to said selection.

10. (Currently Amended) The system of claim 7, further comprising a data processing system for receiving call information from said calling party caller, and for sending a distinctive call waiting tone to said participant according to said call information.

11. (Currently Amended) The system of claim 10, wherein said call information identifies said calling party caller as being out-of-area code with respect to said participant, and said system sends a distinctive call waiting tone to indicate to said participant that said calling party caller is out-of-area code.

12. (Currently Amended) The system of claim 10, wherein said call information further comprises at least one selected from the group consisting of out-of-area code, time of day at point of origin, geographical location, and time zone information.

13. (Currently Amended) The system of claim 7, wherein said system comprises a database comprising subscription information, and a data processing system for comparing said ~~telephone-number~~ call information received from said calling party caller to said subscription information in said database.

14. (Currently Amended) A system for providing a call waiting notification to a participants in an corresponding existing telephone calls, comprising:
an on-line interface through which said participant can associate distinctive ring tones with calling parties;

fixed data storage for storing a list of call characteristics for said calling parties, wherein said/call characteristics comprise at least one of a user name and password;
a computer for matching said call characteristics with entries in said list;

a call analyzer for ~~detecting~~ obtaining call characteristics ~~in~~ for received calls, wherein said call analyzer identifies a caller based upon said call characteristics,

a call waiting tone generator for producing distinctive call waiting tones according to said caller entries in said list which match said detected call characteristics; and,

^{1, 1b} a tone transmitter for sending said distinctive call waiting tones to said participants)

15. (Currently Amended) The system of claim 14, wherein said call characteristics ~~are~~ include at least one selected from the group consisting of out-of-area code, time of day at point of origin, geographical location, and time zone characteristics.

16. (Original) The system of claim 14, further comprising structure for selecting said call characteristics from a menu of available call characteristics.

17-18. (Canceled)

^{b1} 19. (Original) The system of claim 14, further comprising (password verification structure.)

20. (Currently Amended) A method for providing a call waiting notification to a participant in a telephone call, comprising the steps of:

providing an on-line interface through which said participant can associate distinctive ring tones with callers;

storing a list of call characteristics;

~~detecting~~ obtaining call characteristics comprising a specified telephone number of the participant in the telephone call and at least one of a user name and password for an inbound call;

comparing said call characteristics for said inbound call to said list of call characteristics to determine identify a caller placing said inbound call if there is a match,

generating a call waiting tone according to the caller call characteristics of said match,
and
